

# What is Markdown?

---

Markdown is a way to add styling to plain text. It uses simple symbols to indicate formatting (like bld, italics, headings, and lists). It makes it easy to write and read, even in its raw form. Markdown is used for everything from notes and essays to documentation. There are some extensions to make Markdown easy which it can help with creating tables, checking spelling, and converting markdown to other formats (like PDF or HTML). headings use #, to bold use \*\*, Italics use \_ Links and images use . Create a new file by saving it with .md, you can also preview your work to see how it will look in document form
